

ECSTA Serie

Professional CTI and TAPI middleware

ON PREMISE PBX

CLOUD PBX

SIP PHONES

The middleware products of the **ECSTA** series enable communication between the telephone system and the IT infrastructure. This allows telephone systems and connected telephones to be easily controlled from the PC.

Welten verbinden. Synergien nutzen.

Zuverlässige Anbindung Ihrer Telefonanlage an Ihre IT-Welt

Telephone system control via central server

The ECSTA series enables smooth communication between the telephone system and the IT infrastructure so that computer-based applications can be used directly when calls are received.

Integrated future security

All products of the ECSTA series are available as 32-bit and 64-bit Microsoft Windows operating system compatible versions and therefore provide smooth support for the latest generation of Microsoft operating systems.

Multiple instances possible

To install any system on a central Windows server, the ECSTA series offers the option of multiple instances.

Simple initial installation. Problem-free maintenance

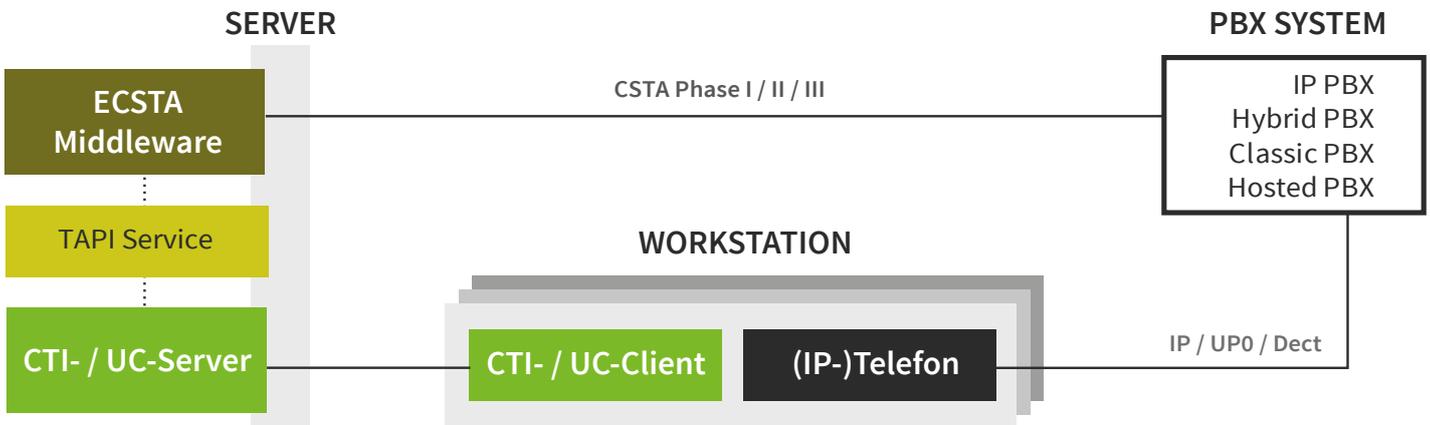

Transparent functionality, maximum scaling as well as excellent performance characterize the ECSTA drivers. The automatic reading of all extensions of the telephone system also allows for a quick setup.

Location networking. Independent of manufacturer

With the estos MultiSite/MultiVendor strategy of the ECSTA series, different telephone systems at several locations can be networked simply and efficiently.

Certified quality

Regular certification of the middleware directly with the manufacturer guarantees reliable operation and smooth support.
