MetaDirectory

LDAP server for easy access to contact data

MetaDirectory merges different databases into a single, consistent LDAP directory that can be used on a company-wide basis. This makes relevant data such as telephone numbers or contact details available to all employees. The intelligent preparation of the data enables easy searching and fast presentation of the results – even with large and dispersed databases.

estos.com

Easy to search, fast to find. Company-wide

A global information service for contact details

Easy search, fast results
MetaDirectory replicates data from different data sources into one directory. At the same time, all telephone numbers are standardized and normalized.

See who's calling
MetaDirectory is the basis for caller identification. The contact data can be quickly presented in the call window

Protect important data
In accordance with the „need-to-know" principle, only the relevant information is displayed.

Keeping an overview
With Contact Merge, results from different data sources are clearly summarized in one contact in the web portal.

Access all data on the move
MetaDirectory's responsive web portal is available not only via laptop or at the workstation, but also via smartphone or tablet.

Easy to connect
The replicators can be used to connect classic databases as well as the web service interfaces of selected cloud-based solutions.
