

The unified communications & CTI software suite **ProCall Enterprise**, can be expanded in its functional range with further, complimentary estos products, in order to fully exploit the comprehensive potential of a modern communications software solution:

- With **ProCall Analytics**, the resulting communication data is additionally evaluated and clearly displayed
- **ixi-UMS** enables the use of fax, voice and SMS
- The integration of **MetaDirectory** creates the basis for business process integration

ProCall

As diverse as a company communicates on a daily basis, all of these communication features run with **ProCall Enterprise** in one application.

# ProCall Enterprise

How to fully exploit the potential  
of modern communications software

**Try us**  
45 days without registration

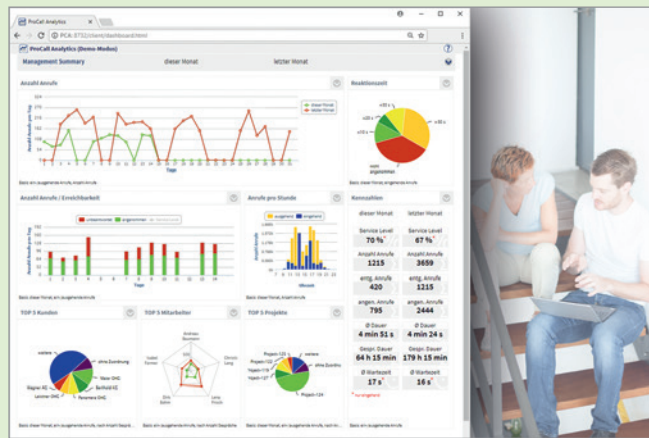

## + ProCall Analytics

Evaluation of communication data

Smooth integration with ProCall Enterprise minimizes the need for configuration. All communication data is automatically sorted and evaluated in real time

### Joachim Frenzel, ProCall Analytics Product Manager:

„These evaluations enable companies to identify weak points, optimize processes and thereby ensure long-term service quality.“

**ProCall Analytics** is an add-on module for ProCall Enterprise that evaluates communication data and presents it clearly. The software provides a quick overview of availability and call volumes. Evaluations can be displayed in all common browsers and additionally

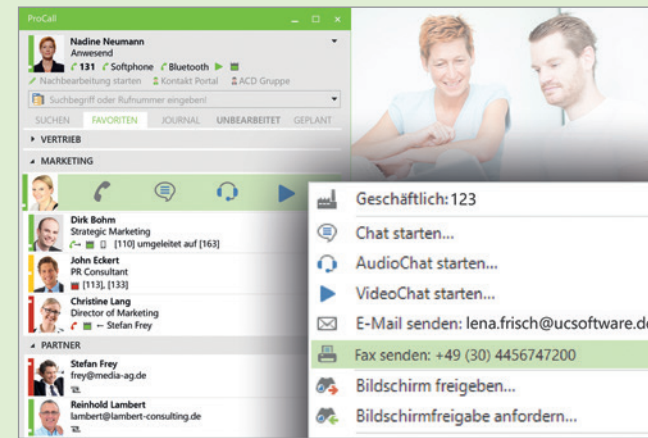

## + ixi-UMS

Expansion of communication channels

The **ixi-UMS** unified messaging server integrates with the ProCall Enterprise solution: Users can send faxes directly from their client. The technical processing is handled by the unified messaging server **ixi-UMS**.

### Bernd Kattner, ixi-UMS Product Manager:

„ixi-UMS expands on the high-functionality of ProCall Enterprise with the additional channels of fax, voice and SMS. The combination of these two products makes ProCall Enterprise and **ixi-UMS** a unified messaging and unified communications suite serving all major communication channels in the company.“

**ixi-UMS** is a unified messaging software that manages fax, voice and SMS services under one interface – being sent and received in their familiar messaging client such as Microsoft Outlook or IBM Domino.

## + MetaDirectory

Integration into business processes

By connecting **MetaDirectory** to ProCall Enterprise, caller information is displayed as soon as the call is received.

### Joachim Frenzel, MetaDirectory Product Manager:

„With the help of **MetaDirectory**, we interlink business processes already automated in ERP, CRM and industry solutions. As a result, information such as the name, the customer number and any recent orders, are already available when the call is received.“

**MetaDirectory** combines a variety of company-class contact data sources into a single, company-ready directory for a perfect overview
